Brute-Force Attacks, Framework Recognition, Phishing, Bucket Brigade, Keylogging, Server Breach, Backups, Fail-Save Management

Analyzing Analytics & Strategy

Analytics & Statistical Strategy, Usability Improvement Metrics, Statistic Reports, In-depth User Platform Targeting, Bounce Strategy Improvements, Geo Location Strategies, Community Analysis

Managing Agility & Scalability

Code Management, Browser Version Control, Website, Dud-Improvements, Redesign, Disk Space Management, Traffic Improvements, Data Usage Improvements

Introduction

Keeping track of standard accounting practice with a standard accounting package is pure standard, but when it comes to running integrate business divisions effectively, and keeping in touch with profitability, its highly unlikely that your standard local reports will give you the information you need!

Description

It's long relationship with **Life Green Group (LGG)**, On the Verge (OTV) has gotten to know the business intricacies in running a multi-divisional contracting and maintenance business. One of the major challenges in contracting businesses is getting Operations to talk the same language as the 'Beenies' (Accountants), and to understanding what drives profitability other than Income.

Managers rarely understand, or take time out to try and understand, what information is produced through standard reports, and reading between the figured lines is not as easy as it is for accountants. A simple one line report which incorporates enough detail to inform them on how far from the break-even point they are is in most cases more efficient.

OTV took the initiative to design and develop a Proof of Concept Solution (POCS) to bridge the above shortcoming, which was presented to the Management of LGG in July 2013. The POCS was received with great excitement, and the ball was set rolling to finalise and implement the solution.

The web based solution establishes a platform accessible by operations managers as well as accountants to scrutinize jobs, and incorporates easy understandable summary and detailed reports, customized to business processes, which is updated in real time and accessible wherever, wherever.

As data security is of the utmost importance, OTV worked closely together with the IT Consultants of LGG to ensure the data is properly secured through an internal virtual private network.

The project went Live in September 2013, and the anticipated excitement of Management over the project is filtering through to operations, which will no doubt ensure more profitable jobs.

BUILDING SOLUTIONS FOR EVERYDAY PROBLEMS

Our Focus Aims To Improve And Build Your Business Without Being A Cost
